

WHICH STEEL LOCKER FABRICATION IS THE IDEAL CHOICE FOR YOUR PROJECT?

At Lockers Manufacturing, we offer a range of locker options designed to meet your unique needs—whether you require the rugged durability of welded lockers or the flexible assembly of knockdown (KD) lockers. Both options are crafted with long-term reliability in mind, ensuring that you receive high-quality solutions regardless of the choice.

Our welded lockers are engineered for maximum strength, designed to withstand years of use with minimal maintenance. They are ideal for environments where heavy-duty performance is essential. On the other hand, our knockdown lockers provide flexibility in assembly and transport, making them a practical and efficient solution for projects requiring cost-effective and customizable installation options.

Both welded and knockdown lockers are built with the same commitment to **quality and sustainability**. Manufactured in the USA using high-quality, domestically sourced materials, Lockers Manufacturing supports the **Build America, Buy America** initiative. By choosing our products, you're investing in superior craftsmanship and environmentally responsible manufacturing.

Customization is a core part of our service. Lockers Manufacturing provides endless design options tailored to meet the specific needs of your project. Whether it's material choice, finish, or custom configurations, we ensure that your lockers are built exactly to your specifications.

We stand behind our products with industry-leading warranties, offering up to 25 years or a lifetime, whichever comes first. This ensures your investment is protected, no matter which locker solution you choose.

ALL WELDED vs. KNOCK DOWN

When selecting lockers, it's important to consider both short-term and long-term needs. Welded lockers typically come with a higher initial cost, while knockdown lockers offer cost advantages upfront. However, each option brings unique benefits depending on your project requirements.

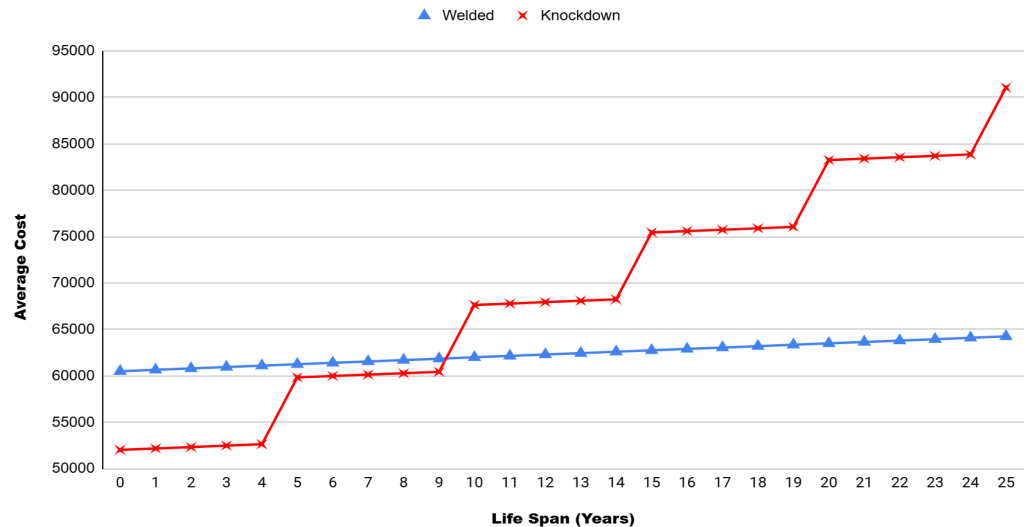

Here's a cost comparison for a mid-sized project:

Welded lockers: \$60,500 upfront

Knockdown lockers: \$52,030 upfront

Over a 25-year period, including replacement parts and maintenance, welded lockers may cost approximately \$64,250, with fewer repairs needed due to their robust construction. Knockdown lockers, being more modular and easier to assemble, might have higher maintenance costs over time, potentially totaling around \$91,055 due to part replacements and upkeep.

Overall Cost : All Welded vs. Knock Down

Both welded and knockdown lockers offer value in different ways. At Lockers Manufacturing, we're here to help you determine the best solution for your specific project, ensuring durability, ease of installation, and long-term performance tailored to your needs.
